

GenesisL1 (L1) / OSMO on Osmosis

Full historical trading & liquidity report · pool 732 · USD-denominated · generated 2026-10-06 19:35 UTC

\$1,052,077 LIFETIME VOLUME	40,856 TRADES	5,873 UNIQUE TRADERS
\$15,906 CURRENT TVL	\$0.2279 L1 PRICE (USD)	6.37 L1 PRICE (OSMO)
\$449,647 BRIDGED IN (USD)	\$590,295 BRIDGED OUT (USD)	

Data window 2021-09-24 → 2026-10-06; every figure uses USD where it can be computed. Source: Numia public BigQuery numia-data.osmosis ; denom/channel verified against the Osmosis archive RPC.

1 · Executive summary

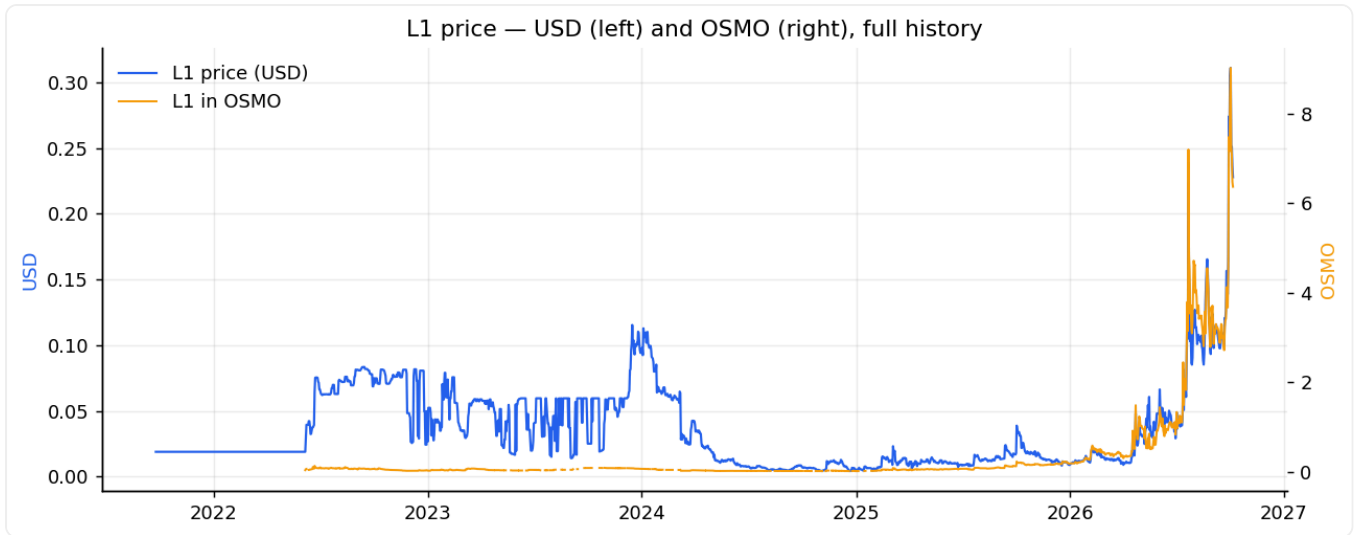

The GenesisL1 native token (`e11`) trades on Osmosis exclusively against OSMO in GAMM pool **732**, the only OSMO/L1 pair. Across the full history the pool has turned over **\$1,052,077** over **40,856** trades by **5,873** wallets. Activity is thin and episodic with a strong 2026 revival; current TVL is **\$15,906**, L1 trades at **\$0.2279** (**6.37 OSMO**). All-time bridged value is **\$449,647** in / **\$590,295** out, and net LP value flow is **\$3,506**.

USD across the whole range. Numia's `pools_volume` gives USD volume from the pool's first trade (2022-06-06). Dividing that per-minute USD by the swap token volume recovers USD prices, so USD prices, LP flows and bridge flows are valued for the *entire* trading history — not only from 2023-11-16 when liquidity snapshots begin. Where both exist the derived USD price matches Numia's snapshot price to within ~1% (median).

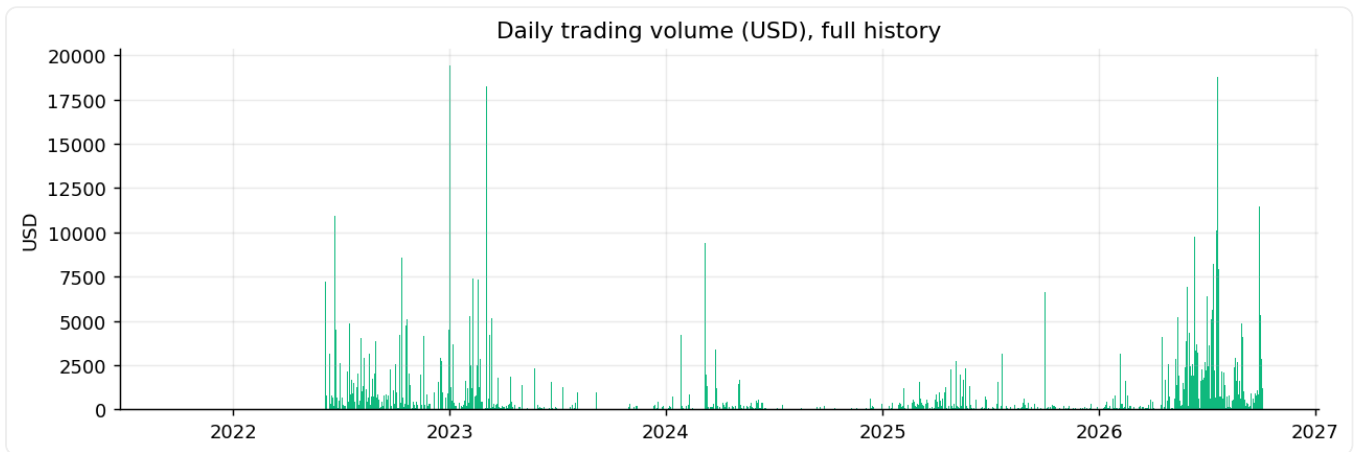

2 · Token & channel identity

Native token	<code>e11</code> · chain <code>genesis_29-2</code> · symbol L1 · 18 decimals
Osmosis IBC denom	<code>ibc/F16FDC11A7662B86BC0B9CE61871CBACF7C20606F95E86260FD38915184B75B4</code>
Denom trace	<code>transfer/channel-253/e11</code>
Channel pair	<code>genesisl1 channel-1 / connection-1</code> ↔ osmosis <code>channel-253 / connection-1539</code>
Prior denom	<code>ibc/DABCB5B2...7775</code> (channel-235) — live 2022-05-05 → 2022-05-31, never used in pool 732
Pool	GAMM pool 732 (uosmo + L1) — only OSMO/L1 pair

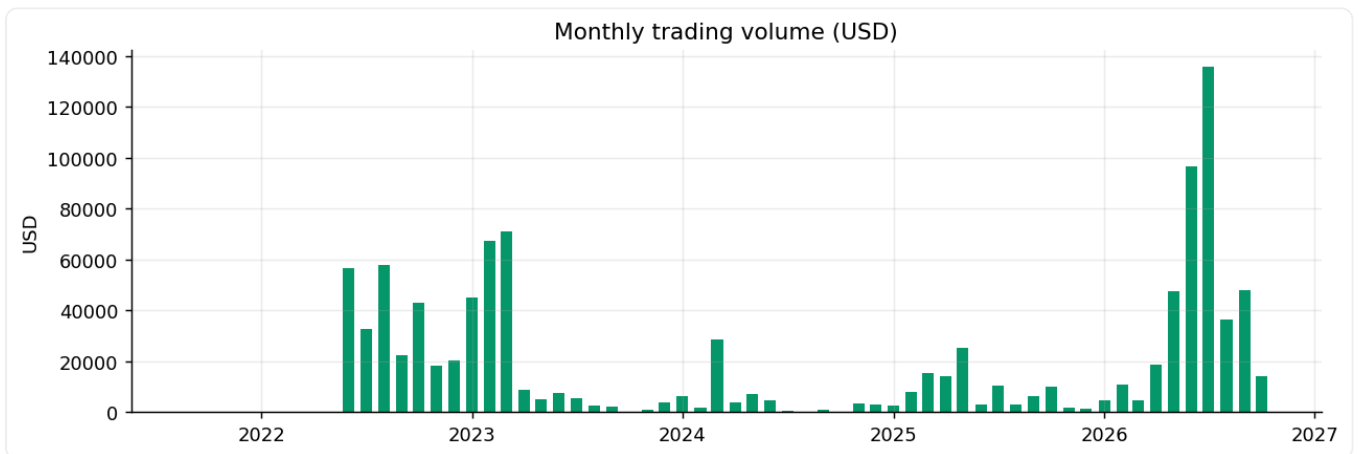

3 · Visualizations

L1 price in USD (derived, full range) and in OSMO. USD pricing is derived from Numia's per-minute USD volume; it matches the independent liquidity-snapshot price to within ~1% where both exist.

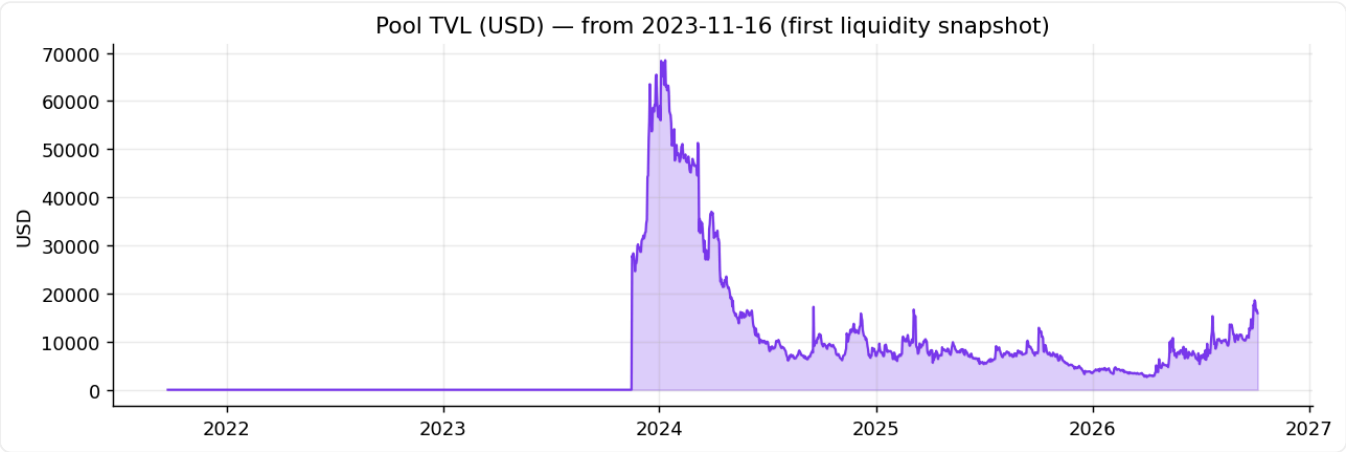

Daily trading volume in USD across the entire history (2022-06-06 onward).

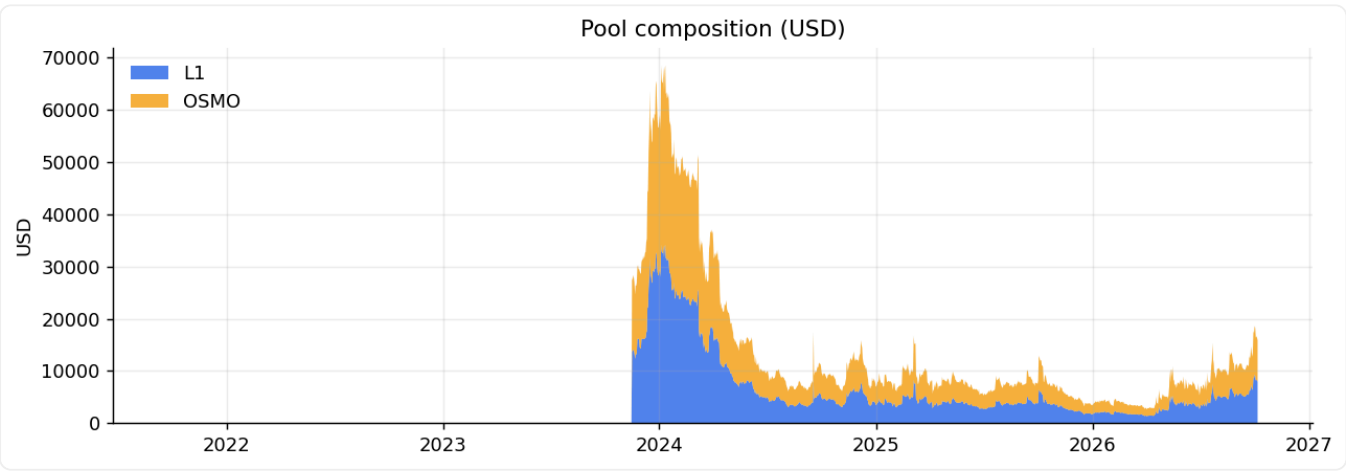

Monthly volume, showing the 2026 revival.

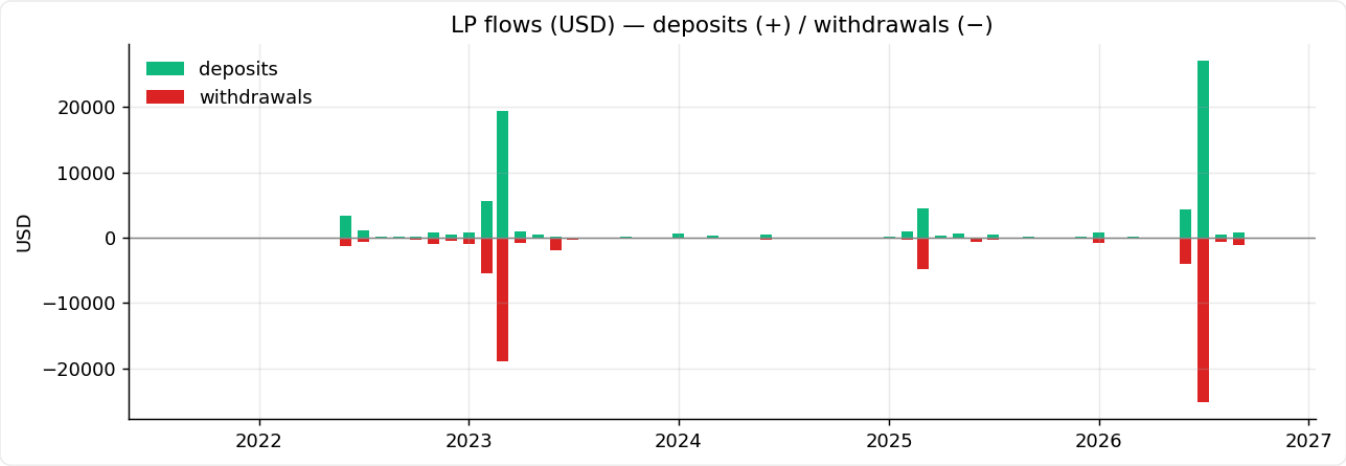

Cumulative volume: \$1,052,077 lifetime.

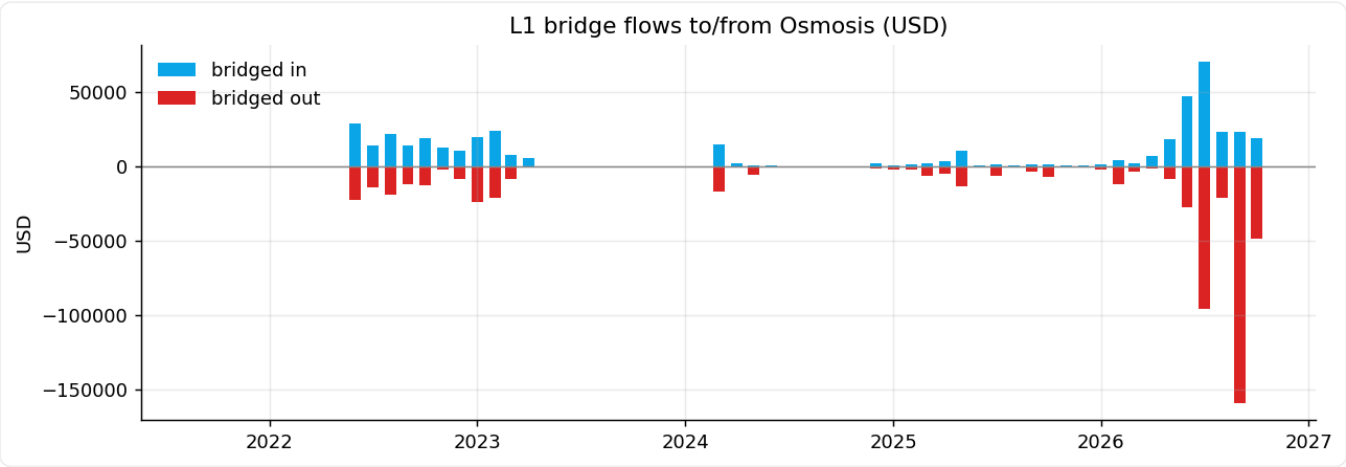

Total value locked in USD. Liquidity snapshots begin 2023-11-16, so TVL has no earlier source.

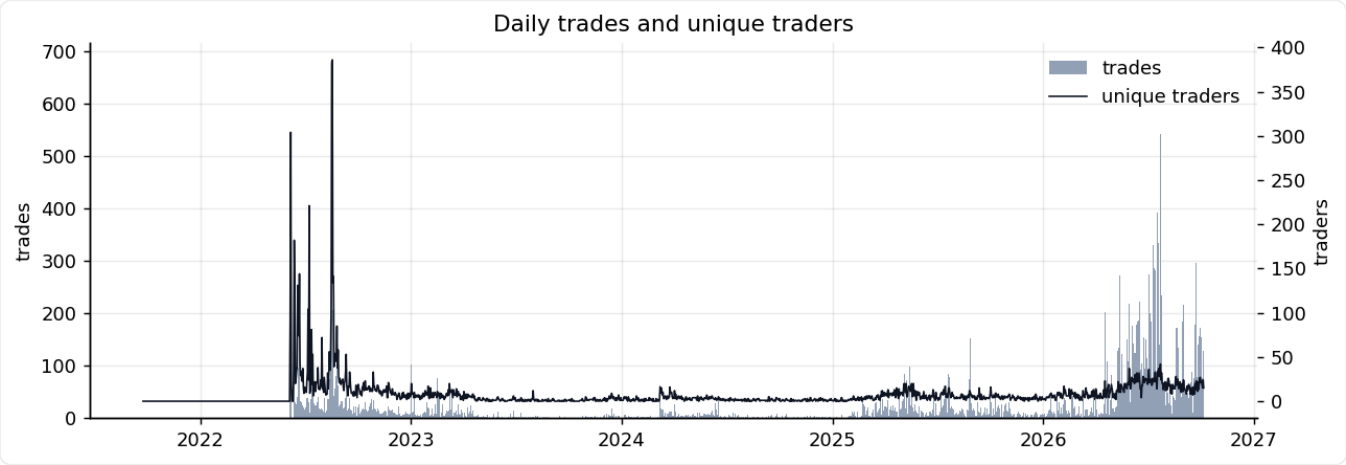

Pool composition by value: L1 vs OSMO (USD).

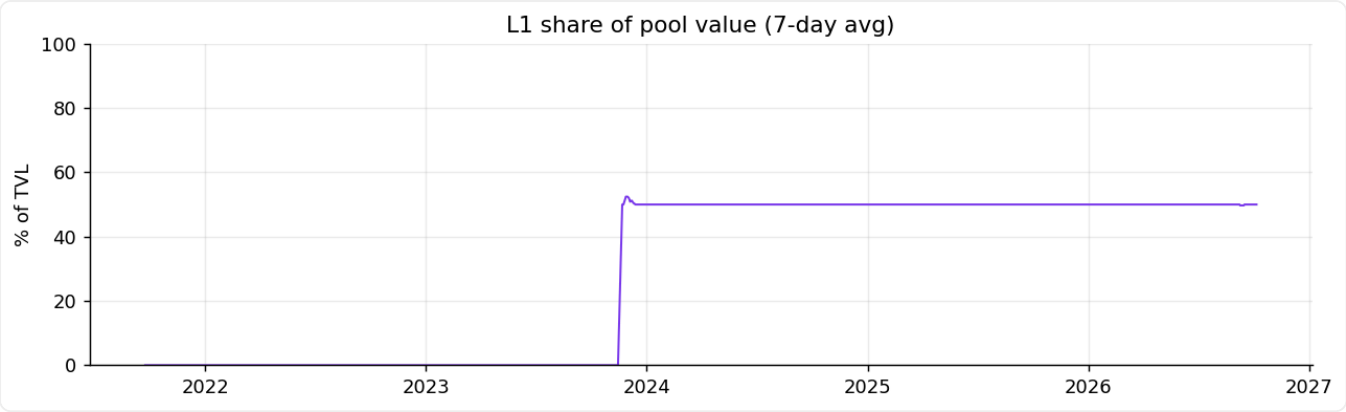

LP deposits and withdrawals in USD, priced from the full-range USD series.

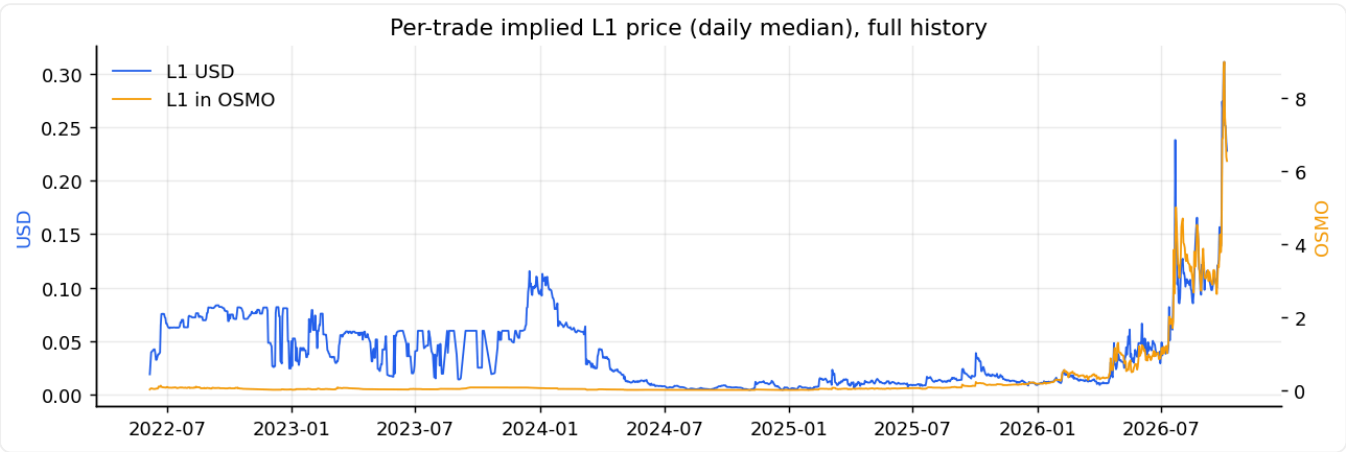

L1 bridged onto (+) and off (-) Osmosis in USD via the channel-253 ICS-20 path.

Daily trade count and unique traders.

L1's share of pool value (7-day average).

Per-trade implied L1 price (daily median) in USD and OSMO.

4 · Monthly activity (USD)

5 · Data, methodology & scope

Data is Numia's public Osmosis BigQuery dataset (`numia-data.osmosis` , EU), queried through the BigQuery sandbox via the REST API, filtered to pool 732 or the L1 denom and exported to local CSV (no Cloud Storage, no billing). Denom/channel were confirmed against `https://rpc.archive.osmosis.zone` .

Table	Rows	Coverage
<code>osmosis_swaps</code> (732)	40,856	2022-06-06 → 2026-10-06
<code>osmosis_pools_volume</code> (732)	2,303,926	2021-09-24 → 2026-10-06 (non-zero 2022-06-06 →)
<code>osmosis_pools_liquidity</code> (732)	3,040,998	2023-11-16 → 2026-10-06
<code>osmosis_lp_gamm_join_pool</code> (732)	712	2022-06-06 → 2026-09-29
<code>osmosis_lp_gamm_exit_pool</code> (732)	662	2022-06-06 → 2026-09-29
<code>osmosis_ics20_receive</code> (L1)	8,660	2022-06-01 → 2026-10-06
<code>osmosis_ics20_transfer</code> (L1)	2,134	2022-06-01 → 2026-10-06
<code>osmosis_asset_denoms</code>	3,750	reference

6 · Caveats

- Swap/LP `token_amount` columns are `FLOAT` ; at 18 decimals L1 amounts lose low-order precision. Use the `ics20_*` tables (`BIGNUMERIC`) for exact amounts.
- USD prices before 2023-11-16 are **derived** (USD volume ÷ token volume) and are smoothed with a 7-day median; treat them as estimates. From 2023-11-16 the USD price comes directly from liquidity snapshots.
- TVL/USD liquidity has no source before 2023-11-16 — the pool balances are not reconstructable from the available tables.
- `osmosis_lock_tokens` and `osmosis_superfluid_staking` are broken upstream (backing `lf-data` tables 404) and are excluded.
- Numia is migrating Osmosis data from BigQuery to ObsessionDB (ClickHouse); this is a point-in-time snapshot.

7 · Deliverables

<code>l1-osmo-raw.tar.gz</code>	all raw CSVs + Parquet + build scripts
<code>l1-osmo-full.csv</code>	consolidated daily metrics, USD-denominated (this report's dataset)
<code>l1-osmo-report.pdf</code>	this report
<code>viz/l1_osmo_dashboard.html</code>	interactive Plotly dashboard
<code>MANIFEST.md</code>	provenance & file inventory
